

## Landscape Supply and Delivery

- Mix materials and/or customers on the same truck for delivery.
- Provide customers with precise placement of materials without the mess and danger of dumping.
- Customers can easily transport and place materials on their job sites with the use of spout bottom bags.
- Bags can be deposited/returned and re-used

## Bagging Bucket

Imported and distributed by Rovers North Inc.  
Westford, Vermont. For more information visit

## Bagging Bucket

- Landscape professionals / Grounds maintenance supply and delivery
- Cofferdams for construction and excavation
- Flood and Erosion control

## ***Landscape Professionals / Grounds Maintenance***

- Materials stay dry on multi-day job sites with the use of duffel-top bags.
- No clean-up after work completion due to precise placement.
- Reduce financial/environmental waste by using materials in bulk rather than bags. Sand and Salt can be loaded and deployed quickly in bulk for plowing operations.

## ***Coffer Dams for Construction and Excavation***

- Bulk filler material can easily be de-bagged after the project and returned to stock location.
- Bags can be re-used many times.

## ***Flood and Erosion Control***

- A single operator can load up to 60 bags per hour. This equates to a 3' tall wall which is 180' long consisting of 90 tons of material built by one person in 1 hour.
- Bulk material can be trucked in and bagged/placed on site.
- Native materials on site can be used as well.
